

What is claimed is:

1. Console allow several end users to play multi- games, movies(media) or music simultaneously on different personal computers monitors or TV by means of one Entertainment unit.
2. This invention has to be upgraded in different stages as new devices or parts are made available.
3. This invention has satellite uplink capabilities that will allow end users to transmit data that is stored on the unit to be transmitted to a personal electronic device of choice. (PDA, Mobile TV units, Portable LCD game controller, Radios or any electronic device that can receive data.)
4. This invention will allow users to use a wireless controller that will work in conjunction with game play on TV or pc monitor, thus any simulate game play that is rendered on the LCD screen is the same game play on TV.
